

ROAD TRAFFIC INCIDENTS – JANUARY TO JUNE 2025

In the month of January until the month of June 2025, a total of 9596 emergency service requests related to traffic incidents were recorded and 10513 patients were assisted.

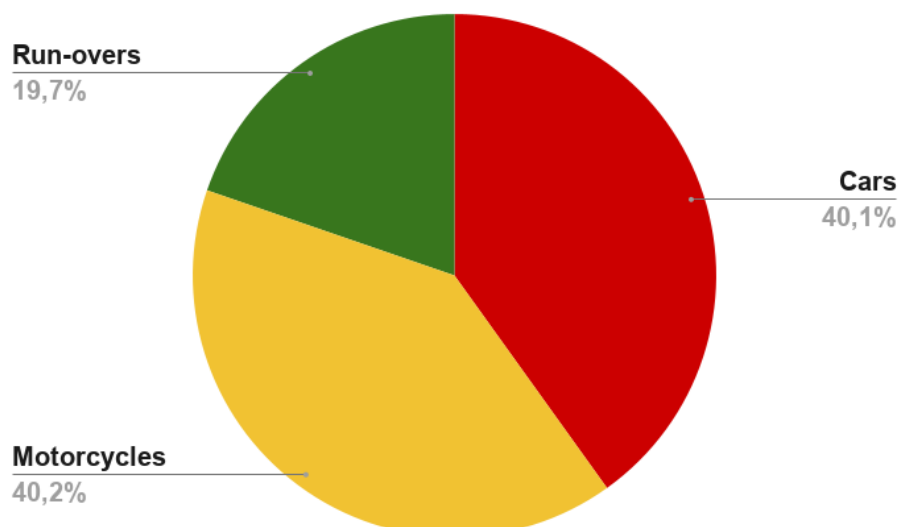

The most frequent type of incident was car-motorcycle collisions (24,93%), followed by vehicle collisions (11,46%) and pedestrian run-overs (10,01%), while car-car collisions rank fourth (8,96%) (Figure 1)

F 1

Of the total recorded incidents, those involving motorcycles accounted for 4402 cases (40,2%), followed by passenger cars with 4393 cases (40,1%), while pedestrian and cyclists run-overs represented 2160 cases (19,7%). (Figure 2)

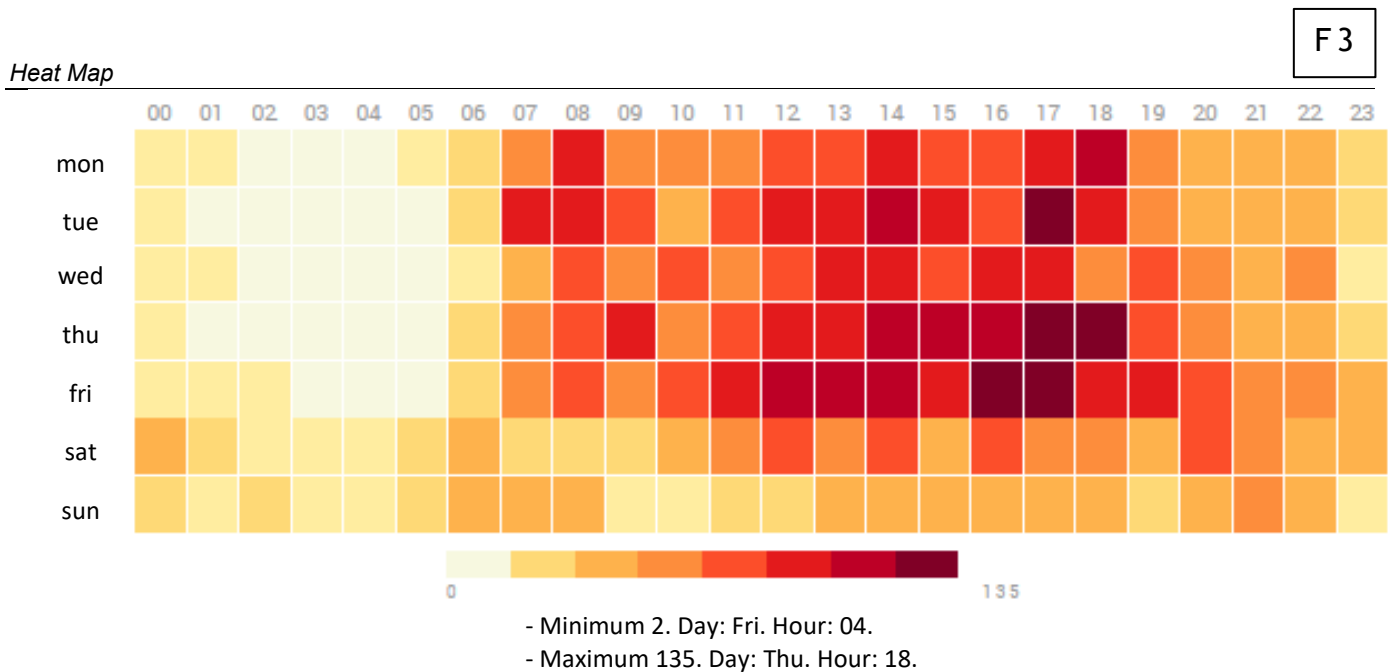

F 2

INCIDENT FREQUENCY BY DAY AND HOUR

The peak incidence of traffic incidents was recorded on Fridays between 13h and 18h. This distribution on Fridays during this period suggests a correlation with population dynamics during the months of January to June.

Data shown represent monthly averages considering day of the week, time of day, and incident frequency. (Figure 3)

INCIDENT MAP

The highest incidence of traffic incidents was observed in the following communes (administrative districts) of Buenos Aires City.

- Commune 1 (Retiro, Constitución, Monserrat, San Nicolas, Puerto Madero)
- Commune 9 (Liniers, Mataderos y Parque Avellaneda).
- Commune 14 (Palermo)
- Commune 15 (Chacarita, Villa Crespo, La Paternal, Villa Ortúzar, Agronomía y Parque Chas)
- Commune 4 (La Boca, Barracas, Parque Patricios, Nueva Pompeya)

DATA REPRODUCIBILITY

The data used in this report were obtained from the Integrated Public Safety System (Sistema Integral de Seguridad Pública - SISeP), covering the period from January 1st, 2025, at 00:00 h to June 30th, 2025, at 24:00 h. The analysis was conducted by applying the specific filters for "vehicle collision", "Vehicule fall" and "run-over," while excluding all associated events. No additional filters were applied to the dataset to ensure the reproducibility of these findings
