

ROAD TRAFFIC INCIDENTS – JULY TO DECEMBER 2025

In the month of July until the month of December 2025, a total of 10318 emergency service requests related to traffic incidents were recorded and 12669 patients were assisted.

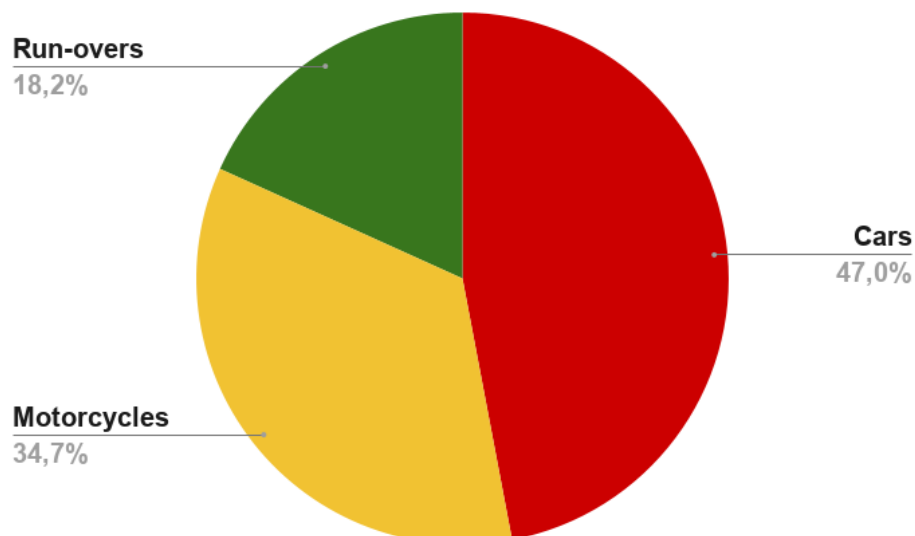

The most frequent type of incident was car-motorcycle collisions (25,79%), followed by car-car collisions (12,35%) and pedestrian run-overs (8,73%), while motorcycle falls rank fourth (7,88%) (Figure 1)

F 1

Of the total recorded incidents, those involving cars accounted for 6097 cases (47,0%), followed by passenger motorcycles with 4506 cases (34,7%), while pedestrian and cyclists run-overs represented 2365 cases (18,2%). (Figure 2)

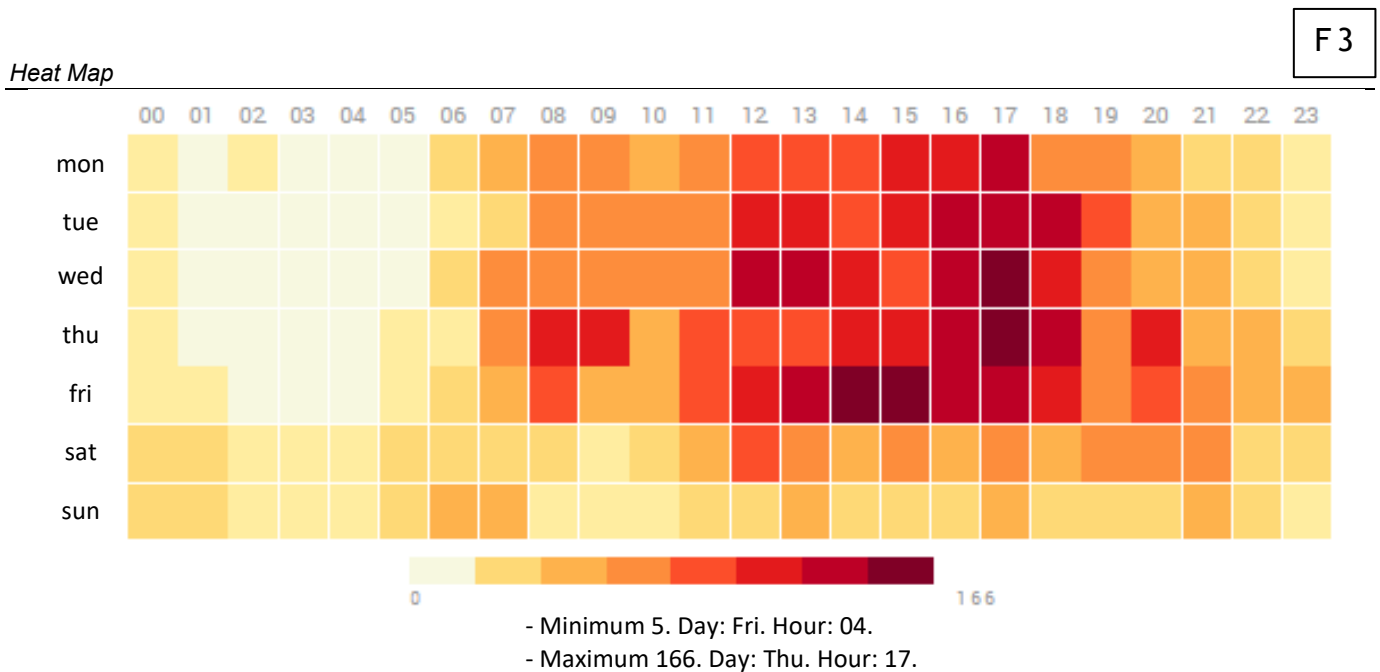

F 2

INCIDENT FREQUENCY BY DAY AND HOUR

The peak incidence of traffic incidents was recorded on fridays between 12h and 16h. This distribution on fridays during this period suggests a correlation with population dynamics during the months of July to December.

Data shown represent monthly averages considering day of the week, time of day, and incident frequency. (Figure 3)

INCIDENT MAP

The highest incidence of traffic incidents was observed in the following communes (administrative districts) of Buenos Aires City.

- Commune 1 (Retiro, Constitución, Monserrat, San Nicolas, Puerto Madero)
- Commune 9 (Liniers, Mataderos y Parque Avellaneda).
- Commune 14 (Palermo)
- Commune 4 (La Boca, Barracas, Parque Patricios, Nueva Pompeya)
- Commune 15 (Chacarita, Villa Crespo, La Paternal, Villa Ortúzar, Agronomía y Parque Chas)

DATA REPRODUCIBILITY

The data used in this report were obtained from the Integrated Public Safety System (Sistema Integral de Seguridad Pública - SISEP), covering the period from July 1st, 2025, at 00:00 h to December 31th, 2025, at 24:00 h. The analysis was conducted by applying the specific filters for "vehicle collision", "Vehicle fall" and "run-over," while excluding all associated events. No additional filters were applied to the dataset to ensure the reproducibility of these findings
